

RideSafe Sprayed Surface System

by Preform, LLC

Delivering continuous protection where riders need it most

RIDESAFE sprayed surface system, by Preform, LLC, combines our nationally approved high-friction preformed thermoplastic for high-conflict areas with our industry-leading sprayed high-friction surface system for enhanced durability and safety.

Optimal for use on long continuous stretches where bicycle traffic is primarily expected we use friction-enhanced preformed thermoplastic to provide a seamless and uniform installation.

Buckets, Squeegees, Mops, Brushes and other clutter on the roadside

Duct taping or stencils required

Mixing of product components on the job site

Waiting required for product to cure before traffic

Best applied using spray equipment, though existing thermoplastic handcarts can also be utilized

Preformed thermoplastic markings, such as bike rider symbols and directional arrows, can be installed directly over the RideSafe surface

A textured, high-friction surface specifically engineered for cyclists

An instant-curing formula that allows traffic immediately after application

Safe, textured, friction-enhanced, easy to apply and long-lasting
